Population estimates from US Census Bureau used to calculate diagnoses rates. ** Data cleaning (either during case interviews or address geo-coding) may lead to reassignment of few cases from one territory to another based on their corrected addresses. These may appear as "decreases" when compared to the previous day's count. These do not reflect errors in the data collection or analysis process but only reflect the minor day-to-day fluctuations in case counts that arise in an evolving public health database like COVID's. **Note:** Sharp increases in territorial COVID case counts often reflect new cases diagnosed at long term care facilities located in those territories during facility-wide /mass screening events. ¹**New cases:** Cases diagnosed in the past 2 weeks only (using the date of sample collection). All data reported are preliminary and subject to change.
